WHAT CHANGED · ITER-13 → ITER-14

Status changes and new completions since last report (March 13 → March 20).

- **#14 Email Confirmation: Pending → Partial**
  AWS SES email service built with 3 templates (match intro, mutual match, meeting confirmation). Sender verification in AWS console still needed.
- **#16 Email Delivery: Pending → Partial**
  Email templates built using AWS SES (not Postmark/SendGrid). Fire-and-forget architecture — no-ops gracefully if unconfigured. Activation pending.
- **#19 Saved Shortlist: Pending → Done**
  Bookmark icon on every match card. All / Saved tab filter. State persists in localStorage. Fully functional.
- **Production domain live**
  meet.proofoftalk.io on Netlify (frontend) proxying to green EC2 (backend). 503 redirect bug fixed. HTTPS

end-to-end.

BY THE NUMBERS

38 Attendees +4 from iter-13	**129** Matches +8 from iter-13	**100%** Enrichment 38/38 enriched
0.69 Avg Match Score min threshold: 0.60	**38/38** Verticals Tagged new — 9/11 sectors	**24** Extasy Orders paid + comp tickets

🛑 Must Fix — Before Any Real User Touches This

6 / 6 · 100%

100%

#	ITEM	STATUS	NOTES
1	Fix URL Validation	✓ Done	Auto-normalises `https://`, eliminates German browser error. Register + Onboarding both patched.
2	Fix Messaging	✓ Done	Connected to match acceptance flow. Mutual acceptance unlocks full chat. Upgraded: intro message can be sent before the other party accepts — they see it when they accept.
3	Remove JS Prompt on Decline	✓ Done	Native browser `prompt()` replaced with an inline styled decline panel + optional textarea for reason. Server IP no longer exposed.
4	Fix Meeting Scheduling	✓ Done	Time slot picker persists to DB correctly. "Your Schedule" timeline block at top of My Matches shows all booked meetings for June 2–3.
5	Success/Failure States	✓ Done	Loading spinners, success confirmations ("Intro sent ✓", "Meeting saved", "Copied") on all major CTAs. No blank redirects.

#	ITEM	STATUS	NOTES
6	Mobile Experience	✓ Done	Bottom tab bar (My Matches · Attendees · Messages). Min 44px tap targets. 3-column Sectors/Synergies/Discuss stacks vertically on mobile. No hover-only states or popups.

🎯 Must Improve — Before Launch to Attendees

5.5 / 7 · 79%

79%

#	ITEM	STATUS	NOTES
7	Align Visual Design to POT Brand	✓ Done	Orange `#E76315` palette applied throughout. Playfair Display + Poppins typography. POT parallelogram logo mark in nav.
8	Add Real Profile Photos	✓ Done	GDPR decision: no auto-fetch from LinkedIn or third parties. Users upload their own photo URL. AttendeeAvatar renders `ui-avatars` styled initials as fallback. Consistent across all match cards and attendee views.
9	Reduce Registration Friction	~ Partial	Form simplified to 4 essential fields (1 step). Extasy API auto-imports all valid attendees (paid + comp). 38 attendees in DB with zero manual entry. Full prefill from ticket code is next step.
10	Simplify Action Model	~ Partial	"I'd like to meet" / "Maybe later" language in place. Primary CTA is clear. Some secondary actions (LinkedIn, ICS download) still present on card — will consolidate.
11	Reframe as Matchmaking Briefing	✓ Done	"Your Top Introductions for Proof of Talk Paris" · "Private Matchmaking Briefing" · "The conversations most likely to matter." Full editorial reframe applied.
12	Simplify Navigation	✓ Done	Role-based: attendees see Matches + Attendees + Messages. Admin sees Dashboard (no appointment scheduling). Bottom tabs on mobile. Home tab removed post-login.
13	Upgrade All Product Language	~ Partial	"Strong match", "Why this meeting matters", "Maybe later", "Match Score" removed — ~90% done. One legacy heading in attendee profile view still pending.

💡 Nice to Have — Category-Defining Differentiators

4.5 / 8 · 56% +25%

56%

#	ITEM	STATUS	NOTES
14	Scheduling with Email Confirmation	~ Partial	UI and DB persistence done. ICS download implemented. AWS SES email service built — meeting confirmation template ready. Sender verification in AWS console still needed to activate.
15	"My Schedule" View	✓ Done	Timeline block at top of My Matches. Shows all booked meetings sorted by date, with time, location, and one-tap chat link for each.
16	Email Delivery of Matches	~ Partial	AWS SES email service built (not Postmark/SendGrid). Three templates: new match intro, mutual match confirmed, meeting scheduled. Fire-and-forget architecture — no-ops if unconfigured. Sender verification pending.
17	Match Refresh as Pool Grows	✓ Done	Extasy ticketing API syncs daily at 02:00 UTC. Now pulls both paid and complimentary tickets. New attendees are automatically enriched and embedded. Admin can also trigger manually from Dashboard.
18	Behavioral Learning	~ Partial	Post-meeting 1–5 star ratings captured. Decline reasons collected. Data feeds Dashboard CSAT metric. ML refinement loop not yet wired.
19	Saved Shortlist	✓ New	Bookmark icon on every match card. All / Saved tab filter with count badge. State persists in `localStorage` under `pot_saved_matches`.
20	Post-Event Continuation	Pending	Not implemented. Post-event strategy deferred to POT 2026 post-event phase.
21	Session / Content Matching	Pending	Phase 2. Core people-matching must be solid first. Scoped for after June 2026.

⚡ BEYOND THE BRIEF

Items shipped that were not in the original feedback document — added to close gaps or raise the baseline.

- **Intro message from match card**
- **Extasy ticketing API integration**

Suggested opener is now a real send button — not just copy. Sends before mutual acceptance; recipient sees it when they accept.

Live sync from ticketing system. Daily automated pipeline: fetch → upsert → enrich → embed. Now includes paid + complimentary tickets.

- **Blue/Green EC2 deployment**
  New green instance (3.239.218.239) running alongside original. Zero downtime. One-command deploy script.

- **Netlify deployment config**
  `netlify.toml` proxy configured. Manager can deploy frontend to CDN; all `/api/*` routes forward to backend automatically.

- **AI Concierge chat widget**
  Floating chat assistant available to all attendees — answers questions about the event, people, and schedule.

- **Post-meeting feedback capture**
  1–5 star satisfaction ratings and meeting outcome tracking feed back into match quality metrics on the organiser dashboard.

- **Production domain** NEW
  `meet.proofoftalk.io` live on Netlify with HTTPS. Proxies to green EC2 backend. 503 trailing-slash bug diagnosed and fixed.

- **Supabase database sync** NEW
  Full RDS → Supabase mirror: 38 attendees, 129 matches, all AI data (summaries, embeddings, intent tags, vertical tags). Ready for migration cutover.

- **1000minds vertical taxonomy** NEW
  11 sector verticals classified by GPT-4o for all 38 attendees. 9/11 verticals represented. Ready for integration into matching pipeline.

- **Complimentary ticket pipeline** NEW
  REDEEMED status added alongside PAID. Pipeline now pulls all valid Extasy orders — paid, comp, and voucher tickets flow through automatically.

ORIGINAL REPORT CARD — FROM Z

March 2026 · Grades as received

CATEGORY	GRADE	COMMENT
AI Intelligence & Matching Logic	A	Smarter than products that cost €50K+. Match categories, deal readiness, suggested openers — this is the real deal.
Match Explanation Quality	A+	Best in class. "$200M into tokenised real-world assets" beats Grip's generic tags.
Competitive Differentiation	A−	Beats Grip, Brella & Swapcard on AI intelligence, zero-friction access, and cost.
Feature Completeness	B−	Dashboard, matches, profiles, scheduling, messaging — it's all there. Problem: half doesn't work yet.

CATEGORY	GRADE	COMMENT
UX & User Flow	C+	Too many steps, too many tabs. Accept/Reject feels like Tinder. C-suite doesn't swipe.
Microcopy & Tone of Voice	C	"Accept Meeting" / "Enrich Profile" — reads like a CRM, not a luxury concierge.
Mobile Readiness	C	Dark mode only. Not tested on actual phones. 70% will open match email on mobile first.
Visual Design & Brand Alignment	D+	Looks like a dev side project, not the Louvre. Zero connection to Proof of Talk brand.
Bug-Free Reliability	D	URL validation breaks registration. Messaging empty. Scheduling broken. JS prompt exposes server IP.
Day-of-Event Utility	D	No "My Schedule" view. No way to find next meeting. No event-day features.

Original GPA: B– (2.8/4.0) — "The brain is A+. The body needs a wardrobe upgrade before it walks into the Louvre. Fix the bugs, dress it in POT's brand, and this becomes the smartest person in the room."
