POT Matchmaker — Match Sample Report

POT Matchmaker — Sample Match Report

Generated from 196 matches across 109 attendees. *Proof of Talk + X Ventures organiser staff (7) excluded from this report. Zohair Dehnadi and Victor Blas are kept as they use the matchmaker like any other VC.* Score range: 0.600 → 0.780, mean 0.711.

How scoring works

Each match has three scores: - **Embedding similarity** — cosine similarity of the two attendees' profile embeddings (text-embedding-3-small, 1536-dim). Pure semantic overlap. - **Complementary score** — deterministic rerank based on sector pairing, intent alignment, and ICP signal-keyword overlap (does A offer what B is seeking?). - **Overall score** — the final score used for ranking. Combines similarity + complementary signals.

Match types: - 💼 `deal_ready` — both parties in a position to transact (investor + startup, buyer + seller). - ✨ `non_obvious` — different sectors solving the same underlying problem. - 🤝 `complementary` — one party has what the other needs.
