

POT Matchmaker — Launch Video Production Script

Date: 2026-05-14 **From:** Shaun **For:** Sithum (production) **Companion brief:** sithum-brief-2026-05.pdf **Runtime:** 0:30 (30 seconds, hard-capped) **Brand line (must close the video):** “Find your 5. Not your 500.”

Direction notes

Element	Direction
Tone	Premium, measured, confident. Louvre Palace energy. NOT hype-bro, NOT corporate. The pace of a Patek Philippe ad, not a SaaS explainer.
VO voice	ElevenLabs — warm + authoritative. Test Adam, Rachel, Daniel. Pick the one whose silences carry as much weight as the words.
VO pacing	Slow. Trust the gaps. The brand line at 0:26 needs 4 full seconds to land.
Music	Generative orchestral (Suno). Soft strings open, low-end percussion enters at 0:05, full lift at 0:22, gentle resolve by 0:28. Around 90 BPM. Ducks under VO at -12 LUFS.
Color grade	Cinematic shots: warm-dusk Louvre palette. Product cuts: slightly desaturated cool tone so they read as “real” against the cinematic warmth.
On-screen text	Sans-serif (Inter, Helvetica Neue, or PoT’s brand font if one exists). Captions ON for sound-off mobile viewers. Bold for emphasis words only.
Cuts	No hard cuts on text — 4-6 frame motion blur on every text reveal. Cinematic-to-product transitions should match-cut (light source, motion vector).

Beat 1 — Hook (0:00 → 0:05)

Shot: Slow cinematic dolly forward toward the Louvre Palace at dusk. Warm window lights flickering on one by one. Pyramid lit from beneath. Subtle atmospheric haze. Shot on 35mm anamorphic feel.

Source: Veo 3 / Sora — render 3 variations, pick the one with the cleanest architecture (no warped windows, no melting glass).

Overlay: At 0:03, abstract overlay enters — 2,500 small golden dots converging and settling into a loose grid pattern over the Louvre plate. Smooth ease-out motion.

On-screen text: > PROOF OF TALK 2026 > 2–3 June · Louvre Palace

(Bottom-third, fade in over 0:02 → 0:04. Sans-serif, tracked-out, no drop shadow.)

VO (0:01 → 0:05): > *“Two thousand five hundred decision-makers. Eighteen trillion dollars in the room.”*

Delivery note: Measured. Comma between the two sentences is a full beat — let “eighteen trillion” land.

Music: Soft strings only. Music in cold-open from frame 1; build is held back until Beat 2.

SFX: Subtle low-frequency rumble under the dolly. Soft “shimmer” whoosh when the golden dots settle (0:03).

Beat 2 — Tension (0:05 → 0:10)

Shots (fast cuts, ~1s each):

1. **0:05 → 0:06** — Macro shot of stacking business cards. Hands placing card on card on card. Top-down. Shallow depth of field. Source: stock (Artgrid) or shoot if Sithum has the time.
2. **0:06 → 0:08** — Generic flooded calendar UI. Wall-to-wall meeting blocks, overlapping invites. Cursor hovering, unable to find a gap. Source: screen-record a stock calendar app, anonymise.
3. **0:08 → 0:10** — Generic conference app UI: an endless scroll of attendee cards, no clear way in. Source: screen-record a competitor app (Brella / Whova) — keep faces blurred to avoid clearance issues.

On-screen text (0:07 → 0:09): > 500?

Large, centred, strikes through with a single horizontal line at 0:09. Disappears by 0:10.

VO (0:05 → 0:09): > *“You could meet five hundred of them...”*

Delivery note: Trails off on “of them” — the ellipsis is real. Hold the silence for 1 second before Beat 3 opens.

Music: Low-end percussion enters at 0:05. Tension hit on the strikethrough at 0:09.

SFX: Subtle “card slap” on each business-card cut. Cursor click on the calendar (0:07). Sharp “strike” on the strikethrough (0:09).

Beat 3 — Product Proof (0:10 → 0:22)

This is the heart of the video. Sithum has all five product screen-records (delivered separately). Sequence them in this order with quick, confident cuts. No screen sits longer than 3 seconds.

Shot 1 — My Matches (0:10 → 0:13): - Land on the My Matches page on `meet.proofoftalk.io`. - Slow scroll through 3 mutual-match cards. - Highlight the one-line “why this matters” reason under each name (callout box with subtle pulse — guides the eye).

Shot 2 — AI Concierge drafting (0:13 → 0:17): - Open the AI Concierge chat panel. - *“Your profile is 67% complete — I can draft your conference goals based on your role and profile.”* - User taps **“Yes, draft my goals.”** - Three candidate chips fade in. - User taps the middle one → textarea opens pre-filled → user edits one word → taps Save. - Green confirmation: *“Saved. I’ve kicked off a match refresh in the background.”*

This shot proves the AI is doing real work, not theatre. Sithum: keep this beat 4 seconds — it’s the longest single shot in the video.

Shot 3 — Mutual match alert (0:17 → 0:19): - Land on home page with the orange “Mutual interest” nav badge visible. - Tap through → land on the mutual-match card with the named attendee (consented — use the real signed-release name from Task 2 of the production plan, or blur if no release). - *“Marcus also picked you.”*

Shot 4 — Free-slot booking (0:19 → 0:22): - Show the booked meeting card on My Matches with a real date + time + location chip. - The chip reads: *“Both free at 11:30 — Tue 2 June, Café Marly.”*

On-screen text (sticky lower-third throughout Beat 3): > Find your 5

Small, lower-left. Doesn’t compete with the product UI.

VO (0:10 → 0:21): > *“...or let our AI read every profile, find the five who matter to you, and book the meeting.”*

Delivery note: Pace picks up here. This is the “answer” to Beat 2’s question. Each clause lands on a product screen — “read every profile” on Shot 1, “find the five” on Shot 2, “book the meeting” on Shot 4. Sync the VO edit to the cuts, not the other way around.

Music: Orchestral lift starts gently at 0:12 and builds toward Beat 4. No big swell here — that’s for Beat 4.

SFX: Soft UI tap when “Yes, draft my goals” is pressed (0:14). Subtle “save” chime on the green confirmation (0:16). The “Marcus also picked you” badge gets a soft notification ping (0:17).

Beat 4 — CTA (0:22 → 0:30)

Shot: Slow drone pull-out from the Louvre Palace at sunrise. Soft pastel sky. No tourists. Shot on 50mm feel. Source: Veo 3 / Sora — same render-three-pick-one approach as Beat 1.

At 0:27, the POT logo fades in centred over the Louvre, then settles into the lower-third for the URL card.

On-screen text (0:25 → 0:30):

Centred, two-line layout, full screen weight on the brand line:

Find your 5. Not your 500.

Then at 0:28, the URL replaces the brand line in the lower-third:

meet.prooftalk.io · *Claim your matches*

(For the prospect cut variant, the URL reads `proofoftalk.io · Get your ticket`. Sithum to deliver both variants if budget allows; if not, go with `meet.prooftalk.io` as the primary — it routes both audiences correctly.)

VO (0:23 → 0:28): > “*Find your five. Not your five hundred.*”

Delivery note: This is the line that has to land. Slowest delivery of the whole script. The pause between “five” and “Not” is a full beat. Half a beat between “Not” and “your”. The final “five hundred” trails into the music swell.

Music: Full orchestral lift at 0:22 → peak at 0:26 over the brand line → gentle resolve by 0:30.

SFX: Soft “logo land” thump as the POT logo lands at 0:27. Nothing else — the music carries the close.

Captions (for sound-off mobile viewers)

LinkedIn auto-captions are unreliable. Burn open captions into the master cut. Position: lower-third, white text with subtle dark backdrop for legibility.

Time	Caption
0:01 → 0:05	2,500 decision-makers. \$18 trillion in the room.
0:05 → 0:09	You could meet 500 of them...
0:10 → 0:21	...or let our AI find the 5 who matter, and book the meeting.
0:23 → 0:28	Find your 5. Not your 500.
0:28 → 0:30	meet.prooftalk.io

Export deliverables

Cut	Aspect	Resolution	Use
master-16x9.mp4	16:9	1920×1080 @ 30fps, H.264, 12 Mbps	Archive + sales decks
linkedin-1x1.mp4	1:1	1080×1080 @ 30fps, H.264, 8 Mbps	LinkedIn feed
reels-9x16.mp4	9:16	1080×1920 @ 30fps, H.264, 8 Mbps	IG Reels + X mobile
x-16x9.mp4	16:9	1280×720 @ 30fps, H.264, 5 Mbps	X

For the 1:1 and 9:16 cuts, reframe — don't crop. The product screens need the UI elements visible; the cinematic shots can be safely punched in.

Approval & sign-off

Stage	Approver	Sign-off
First cut	Shaun	☐
Locked picture (V1)	Zohair	☐
Locked audio mix	Zohair	☐
Final master + channel exports	Zohair	☐

One revision round only after the V1 review. Perfectionism kills launches.

Hard rules (don't break)

- Brand line must close every cut.** No variants. *“Find your 5. Not your 500.”*
- No licensed music library tracks.** Suno generative or original. Every conference app uses the same Artlist beds — sounds cheap.
- No AI-obvious humans** in the cinematic shots. People in the distance only. No melting faces, no warped limbs.
- Product cuts must use real data.** Real attendee names (consented), real timestamps, real verticals. No `John Doe / Lorem Ipsum`.
- 30 seconds, hard-capped.** If a beat overruns, trim the beat. Don't extend the runtime.

6. **No voiceover puns on “five” / “5”** beyond the brand line. The closing line is the only place that pivot works — overusing it dilutes it.

Reference: the brief

For the bigger context (audience, channels, distribution plan), see `sithum-brief-2026-05.pdf` already shared.

For the product feature mapping (which screen shows what), see Section 3 of the brief — every feature line there ties to a product cut in Beat 3 above.
